Risk Response

Southwest Horizon School Division, in the interest of providing a safe environment has developed a Risk Response Manual to address incidents that may pose a risk to students, staff or facilities. The Risk Response Manual provides a format for assessment and intervention of critical incidents such as emergencies and environmental dangers, threats and tragic events.

All principals must also update their schools Emergency Response Plan annually in September. Copies of which are to be submitted to both the Melita and Souris Division Office

Emergency drill activities will be planned by the principal and faculty of each building to assure orderly movement of students out of the building area.

The principal of each school will submit annually a current fire exit plan to both the Melita and Souris Division Office and will conduct and record fire drill practices.
